

## VETERINARY PILOT FIELD CLINICAL FIP TRIAL

### NON-EFFUSIVE (DRY) FELINE INFECTIOUS PERITONITIS

Evaluating **NEW EXPERIMENTAL  
FIP FORMULATION (5mg/mL) and Regimen**

✉ [FIPtrial@sassandsass.com](mailto:FIPtrial@sassandsass.com)

#### ▶ PURPOSE:

FIP is a fatal disease with no treatment consensus. Based on the results of **Polyprenyl Immunostimulant™ (PI)** studies by Dr. A. Legendre, we have developed a new formulation & FIP treatment regimen to further increase long-term survival in FIP patients.

#### ▶ PARTICIPATION REQUIREMENTS:

- Cats diagnosed with dry FIP by US-based vets.
- No use of corticosteroids or antivirals.
- Enrollment within two weeks of initial onset of clinical signs.

#### ▶ PROCEDURES:

- Veterinarian and/or owner need to email diagnostic workup & case summary to enroll\*.
- Complete information package will be provided for accepted cases.
- Participants are required to provide a signed consent form\*.
- Report exam & blood test results, including ALB, GLOB, HCT, LYMPH, WBC, NEUT\*.

#### ▶ CAT OWNER RESPONSIBILITIES:

- Timely administer experimental PI formulation.
- Visit veterinarian for exam & blood test every 30 days for three months.
- Fill out & submit a monthly FIP treatment questionnaire\*.
- Pay the cost recovery (a small fraction of the retail price) of the experimental PI formulation plus S&H\*\*.
- Cover diagnostics, blood tests & veterinarian visits.

\* Submit all required forms to [FIPtrial@sassandsass.com](mailto:FIPtrial@sassandsass.com)

\*\* See details on the back of this card.

The FIP Trial will establish the cat's response to the new PI FIP formulation & dosing regimen, and aim to further increase cat's long-term survival and improve quality of life.
